SUPPLEMENT TO REPORT NO.

HP-Werk, Berlin-Oberschoeneweide, Ostendstrasse 1-5.

- 1. The entire output of this factory consists of the following: radio tubes, A series; radio tubes, E series; radio tubes, U series; rectifier tubes; resonance tanks; X-ray tubes; quartz lamps; high pressure mercury lamps; cathode-ray oscillographs; high frequency range finders; low frequency range finders; wire-testing instruments; television sets and accessories; electronic microscopes; electro-acoustic apparatus; telephone transmitters; tele-communication and remote control systems; telephone switchboards and accessories; carrier-frequency main stations.
- 2. Tube production under the T-2 program was 20,000 sets up to 23 November 1951. From this date until 14 December 1951, the program was exceeded by 150 percent, with 42,000 sets, the works management announced.
- 3. A tube set consists of 20 tubes which are delivered all together to a works in Radebeul, near Dresden. Considering the production of 28,000 sets to 23 November and the announced increase of 150 percent to 14 December, it appears improbable that the goal of 42,000 sets was filled, as is stated in technical quarters of the works.
- 4. The attempt to overcome the deficiencies of the cathode spray-paste by gilding or anodizing the first grid has lately been discontinued, from which it is concluded that an objection-free paste has become available. Information from the cathode division is that spray-paste is again being delivered from the West.

- 5. The effort to set up a shop for drawing the cathodes in the works is so successful that the greatest part of the cathodes used can be manufactured there.
- 6. An attempt at sabotage occurred recently in the works. In the glass division, where there are many gas-heated melting ovens, many of the women workers were overcome by escaping gas. Upon investigation a connecting pipe was found that had been cut with a hacksaw.
- 7. The tubes for the "Ruegenradio" station in Berlin-Wahlsdorf have been delivered by the HF-Werk. The tower of this station will be 150 meters high.
